Stand on the future of precast.

Introducing a new way to design-build.

FINFROCK presents the dual-deck: a lightweight versatile and adaptive structural support system that allows all plumbing, insulation, wiring and more to fit within the floors of a completely concrete structure. FINFROCK is a vertically-integrated, pre-cast concrete, design-build firm. To learn more, visit FINFROCK.com/about/Innovation.

FINFROCK

Laser-Focused Precision.

Because precision is efficiency,
and efficiency is your bottom-line.

Tape measures are a thing of the past.All FINFROCK design-build projects are assembled by teams of highly-trained workers, guided by lasers. Laser-guided construction is the future of accuracy, productivity and precision, speeding up the the manufacturing process by 50%. FINFROCK is a vertically integrated, pre-cast concrete, design-build firm. To learn more, visit FINFROCK.com/about/Innovation

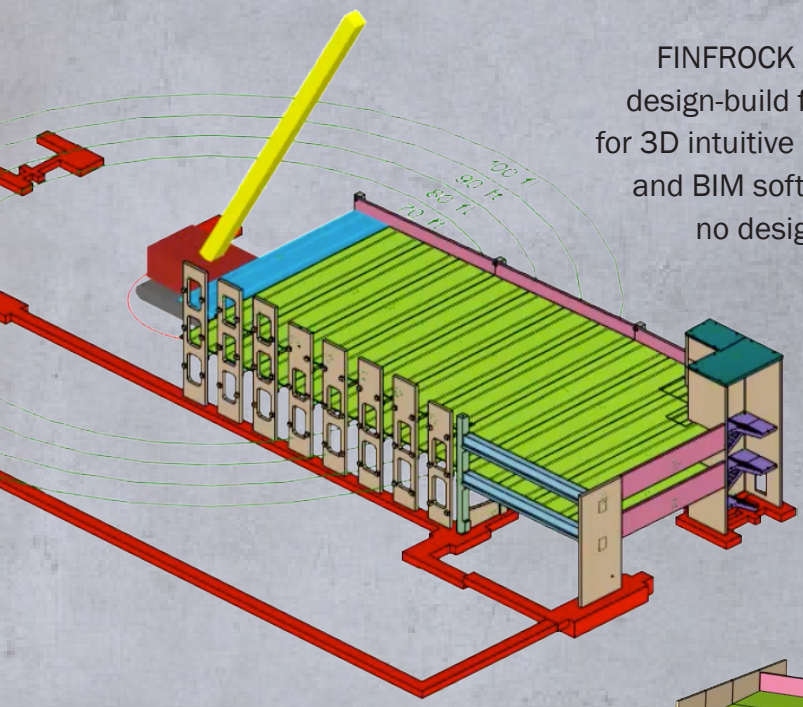
FINFROCK

We don't need to break ground to build.

Technology that virtually elimitates design-errors.



FINFROCK is a vertically integrated, pre-cast concrete design-build firm. We scrapped archaic sketch drawings for 3D intuitive instructions. StructureWorks' 3D modeling and BIM software increases design speed with virtually no design errors. XceleRAYtor™ mobilizes these 3D instructions, allowing for real-time revision. This software, paired with laser technology speeds up on-site production, lowers costs, increases productivity, and reduces overall risk. To learn more, visit Finfrock.com/about/innovation.
